

HOOK-TYPE ALUMINUM SHEAVE

**CHANGE PULLING FORCE DIRECTIONS
WITH EASE**

Change the direction of rope or cable while installing cable in conduit or raceway using iT00Lco's Hook-Type Aluminum Sheaves™. With these innovative hook sheaves, you can remove cable from either side of the sheave once the pull is complete and then reset for the next pull in seconds – without ever disconnecting the sheave from the hook assembly. Using iT00Lco sheaves minimizes the need for cable splicing between beginning and end points of termination, saving you valuable time.
